loops

Loops symbolize unity. They are woven into every aspect of our lives - from the rhythm of our heartbeats, to our perception of goals and accomplishments. Hidden in plain sight, these photos capture my favorite loops, circles and signs of unity in our everyday life. I chose this metaphor of loops for my college essay ([linked here](#)).

intricate designs

Design is the framework for creating just about everything. In order for something to be functional and visually appealing, the elements that make it have to be crafted well. Design fundamentals can be found in nature, architecture, software and hardware too.

Part II

Due to file size restraints, this portfolio has been split
into 2 parts.

Digital Media

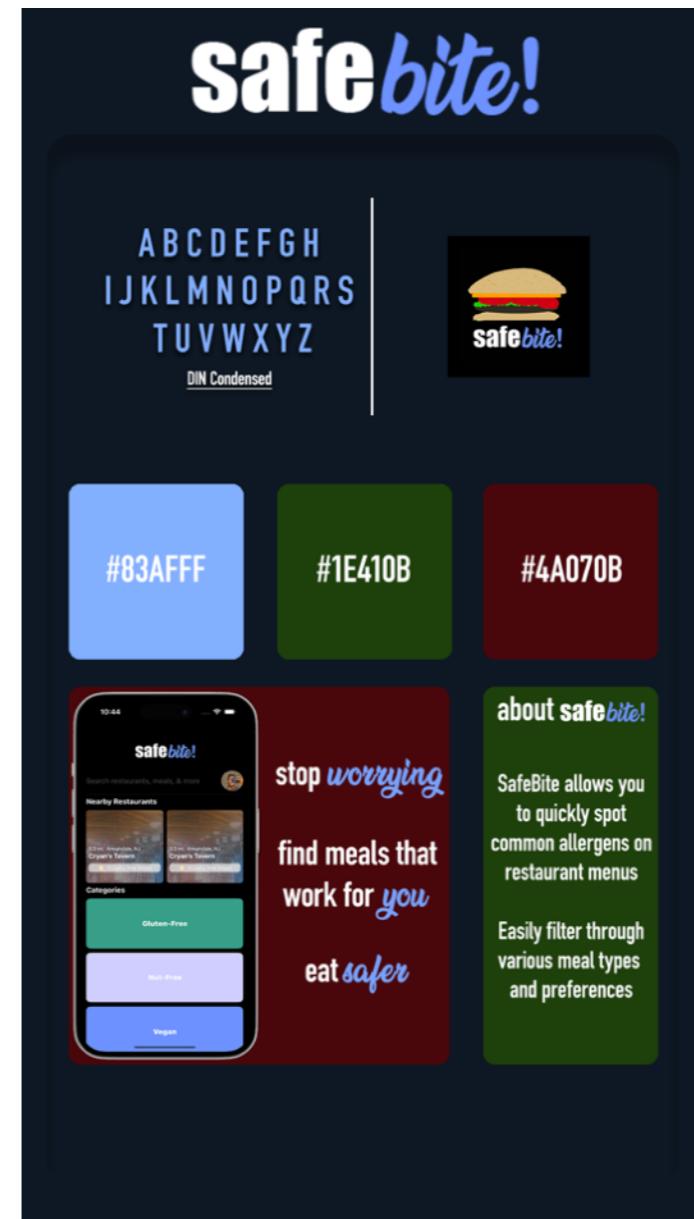

Below are two examples of digital art created with an iPad & SketchBook on the App Store.

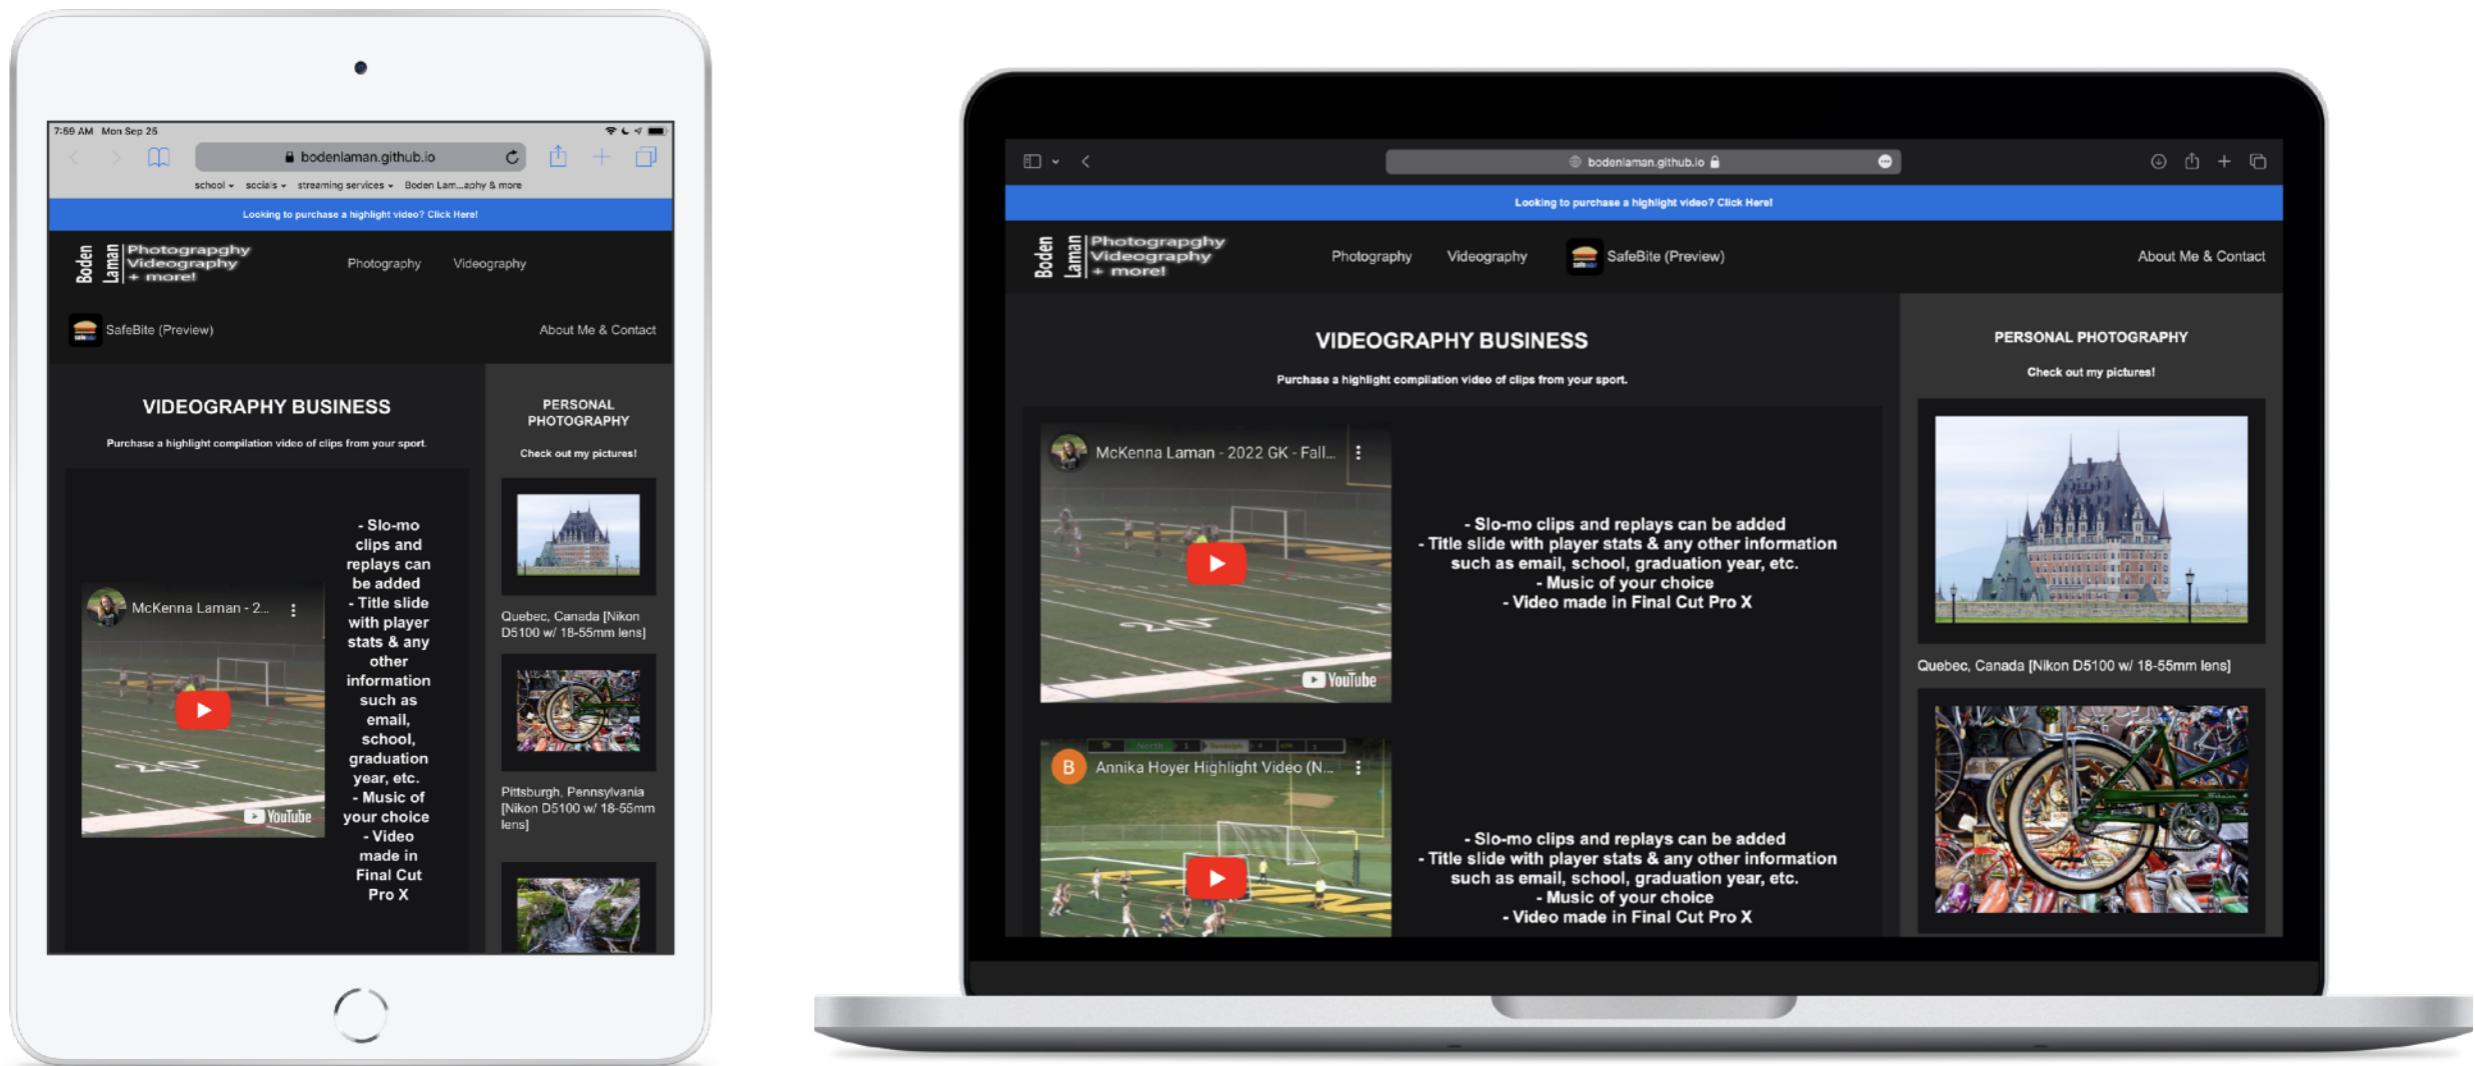

Digital Media

Brand Boards are digital examples of what a company rebrand could look like by combining fonts, colors, and UI elements.

My Website

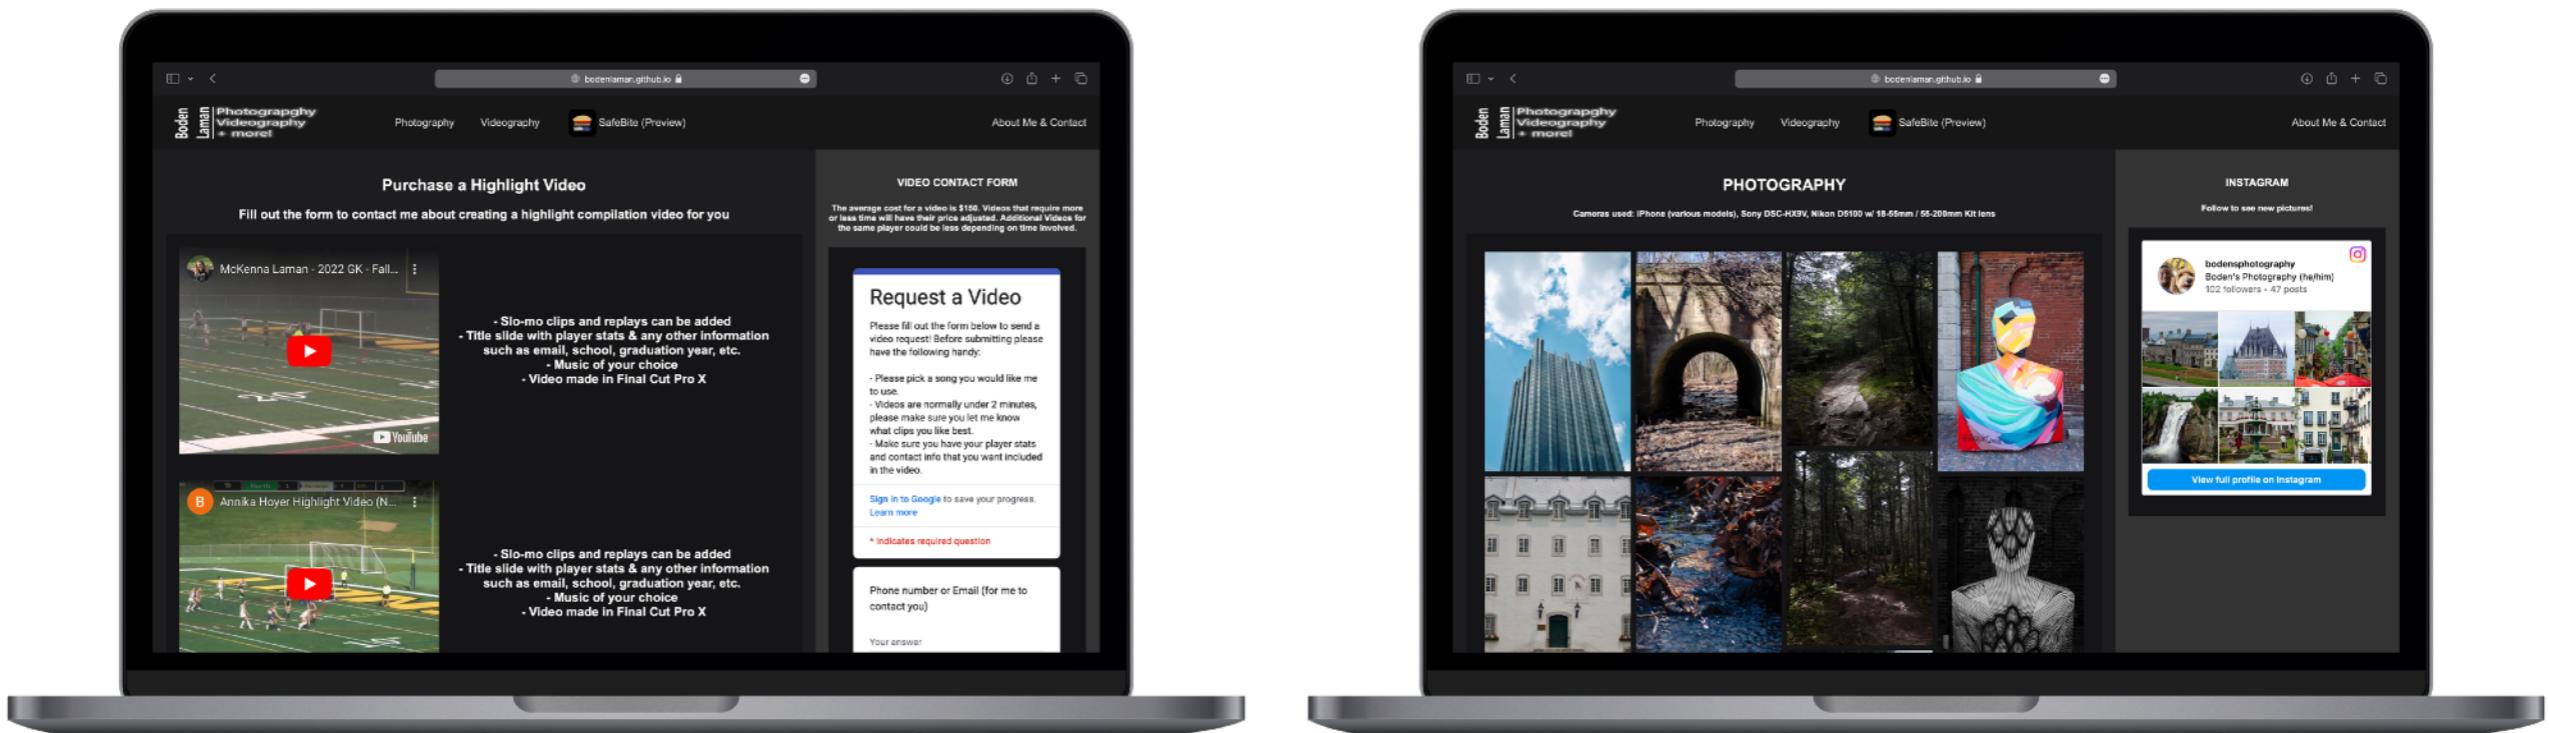

Started in August of 2023, I created this website based on a W3 Schools template linked [here](#). Built with a responsive design in HMTL, my site showcases my photography, videography business, and a landing page for an app concept I created called [safebite](#). You can visit my website [here](#).

My Website

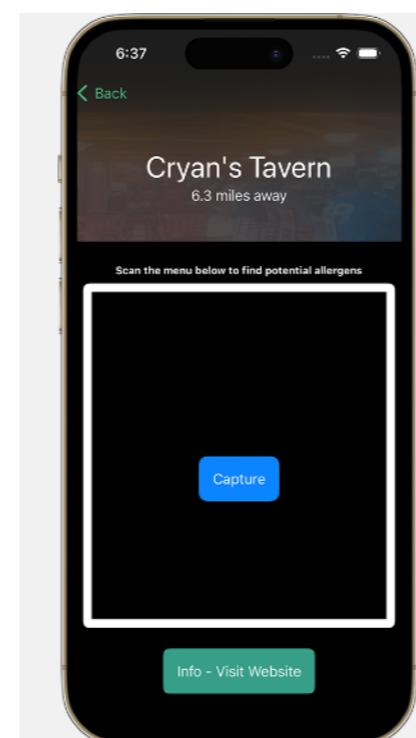

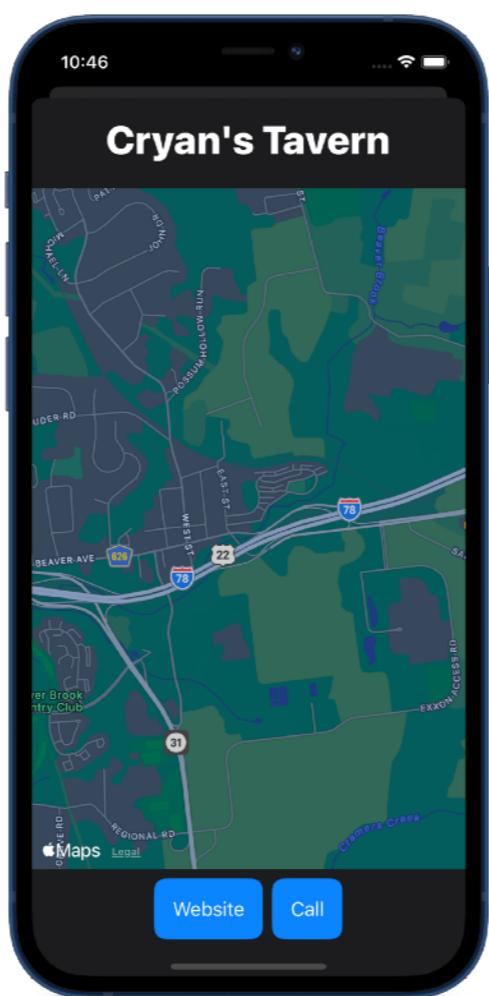

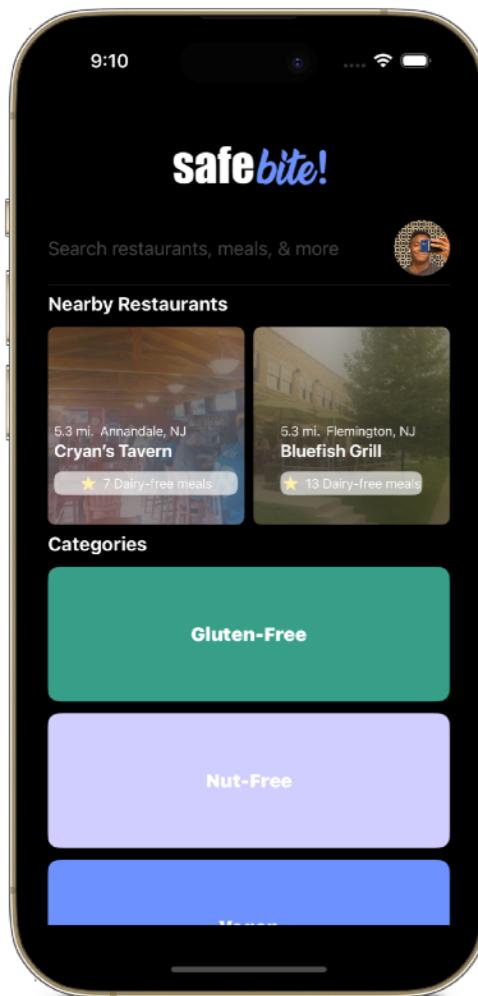

(cont.)

These pages showcase my videography business and my photography. In 2020, I started creating sports highlight videos for my sister who was looking to play field hockey in college. Other athletes saw my videos, and asked for my help. This is how my business began. I created a website, and advertised making montages for a wide range of athletes looking to be recruited by college coaches.

safebite!

SafeBite is a concept I developed that showcases an app that would allow users to effortlessly scan a restaurant menu. Then, it would present the user with clear information on what is safe to eat. I have two family members that are allergic to certain food groups and we realized there is no easy way to check for safe meals. SafeBite is a small innovation with a big impact, ensuring every meal at a restaurant is a worry-free experience!

Intelligent Menu Scanning Technology

SafeBite allows you to quickly hover over menu items to find potentially dangerous meals
